DANISH INTERNATIONAL DEVELOPMENT COOPERATION

GEAP PRESENTATION

Doreen Kinoti
Programme Manager

GEAP Programme Background, Footprint & Results Architecture

An integrated market-systems and enterprise development response to competitiveness, inclusion and sustainability constraints

PROGRAMME RATIONALE

GEAP responded to interconnected constraints in smallholder productivity, market integration, agricultural finance, food safety, climate vulnerability and decent employment, particularly for women and youth.

PROGRAMME AT A GLANCE

2021–2026	DANIDA	MESPT	12	5	11	48,061
IMPLEMENTATION	FUNDING	IMPLEMENTER	COUNTIES	REGIONAL BLOCS	VALUE CHAINS	SHF TARGETED

OVERALL GOAL

Contribute to transforming the economy towards inclusive, green and sustainable economic growth of MSMEs for decent employment creation.

OUTCOME 1

Increased competitiveness and climate-resilient agri-enterprises for decent and green jobs creation in Kenya

01 Inclusive Market Access & MSME Development

Enterprise development • aggregation • market linkages • value addition • digital solutions • market infrastructure

02 Increased Access to Green & Inclusive Agri-Financing to MSMEs

FSP strengthening • tailored agricultural/green finance • financial inclusion • de-risking • investment

OUTCOME 2

Increased sustainable productivity and profitability for smallholder farmers in targeted value chains in Kenya

03 Increased adoption of Climate smart agricultural practices and food safety standards by MSMEs

GAP • food safety & Agribusiness extension • post-harvest management • quality assurance • certification,

04 Green Transformation & increased Climate Adaptation by targeted MSMEs

Green technologies • renewable energy • resource efficiency • climate adaptation • green skills/business models

THEORY OF CHANGE PATHWAY

Capacity & systems strengthening → Adoption & commercialization → Productivity, competitiveness & investment → Farm & enterprise growth → Green & decent employment → Inclusive green transformation

Stronger policies. Inclusive systems. Empowered communities.

Building a competitive, inclusive and sustainable future for Kenya.

GEAP Programme Overview:
Value Chains, Farmers, Geography & Inclusion

A snapshot of the programme's target value chains, farmer profile, county coverage and inclusion targets.

MESPT
MICRO ENTERPRISES SUPPORT PROGRAMME TRUST

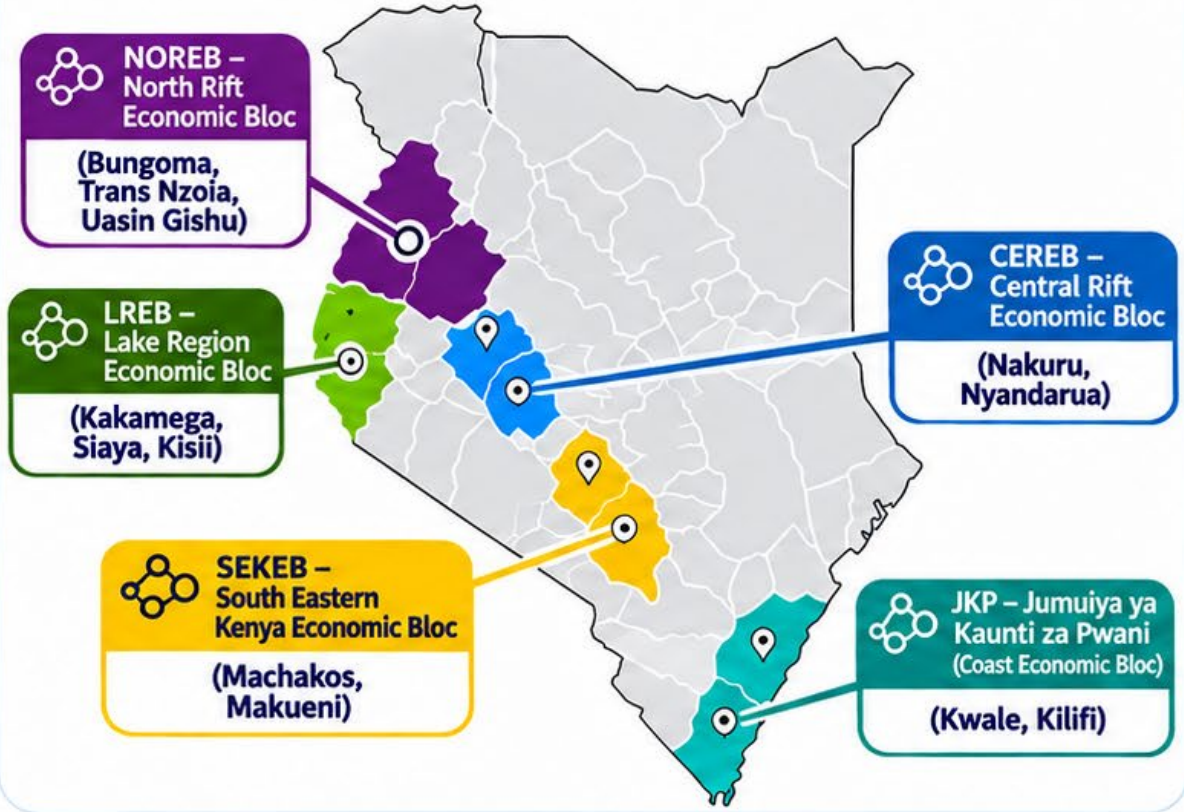

TARGET VALUE CHAINS

- Export vegetables
- Dairy
- Indigenous poultry
- Aquaculture
- Mango
- Avocado
- Banana
- Coconut
- Moringa
- Cassava
- Pineapple

AVERAGE LAND SIZE OF FARMERS

2.6 acres
(cultivated area)

GEOGRAPHICAL COVERAGE (12 COUNTIES) ACROSS REGIONAL ECONOMIC BLOCS

INCLUSION TARGETS (PROGRAMME PARTICIPATION)

Women
40%
(Target)

Youth
30%
(Target)

GEAP worked across 12 counties, focusing on 11 value chains, with an average land size of 2.6 acres per farmer, and targeted inclusive participation of 40% women and 30% youth.

PROGRAMME TARGETS

2021 – 2026 –

DASHBOARD AT A GLANCE

MESPT

MICRO ENTERPRISES SUPPORT PROGRAMME TRUST

The programme targets set for 2021 – 2026 are:

48,061
Smallholder farmers mobilized

125,350 MTs
Sold by SMEs, cooperatives and Farmer Organizations

50
Financial Institutions (FIs) lending to **32,000 SHF**

1,700
Jobs created

4 Billion
Disbursed by last mile partners

7.20 Billion
Sales turnover

6,000
SHF certified across various standards

PROGRAMME ACHIEVEMENTS

2021 – 2026 –

DASHBOARD AT A GLANCE

MESPT

MICRO ENTERPRISES SUPPORT PROGRAMME TRUST

The cumulated results realized across **the major targets are**

46,115

Smallholder farmers linked to markets
(40% women, 30% youth)

184,750 MTs

50 SMEs & 200 Cooperatives and FOs aggregation power

51 / 53093

Last-mile financial access by SHFs

1,781

New jobs & income opportunities created

2.4 Disbursement

Disbursement by last mile partners

9.567 Billion

Sales turnover (cumulative)

6,852

Farmers certified
(Global GAP, organics and other relevant standards)

Programme Effectiveness – *Key Achievements*

Programme Outcome 1: Increased competitiveness and climate-resilient agri-enterprises for decent and green jobs creation in Kenya.

Outcome Indicator	Target (2021–2026)	Achievement (2021–2026)	Performance
Decent jobs created	1,700	1,781	✓ 105% of target
Sales turnover	KES 7.2 Billion	KES 9.567 Billion	✓ 133% of target
SHF certified (across various standards)	6,000	6,852	✓ 114% of target

Programme Results at a Glance

- **46,115** Smallholder farmers linked to markets
- **46%** Women (723) — Target: 40% ✓
- **65%** Youth (920) — Target: 30% ✓
- **KES 9.567 Billion** Sales turnover generated — 133% of target
- **1,781** Jobs created — 105% of target

216 green jobs | 10,423 green-loan beneficiaries (74% women) | KES 347 Million green finance disbursed

GEAP was highly effective at the aggregate outcome level.

The programme exceeded its employment, commercialization, productivity, profitability and ecosystem-restoration ambitions, while evidence and learning reached **81% of target.** Performance was particularly strong in translating value-chain support into increased production, market turnover and economic opportunities, although results were not uniform across value chains.

Effectiveness extended beyond aggregate target achievement to inclusion and market transformation.

Women met the programme's employment inclusion threshold, while youth substantially exceeded it. Increased aggregation, structured market linkages and enterprise development translated production gains into **KES 9.567 Billion** in sales, while green jobs and financing began embedding climate-resilient economic activity within supported value chains.

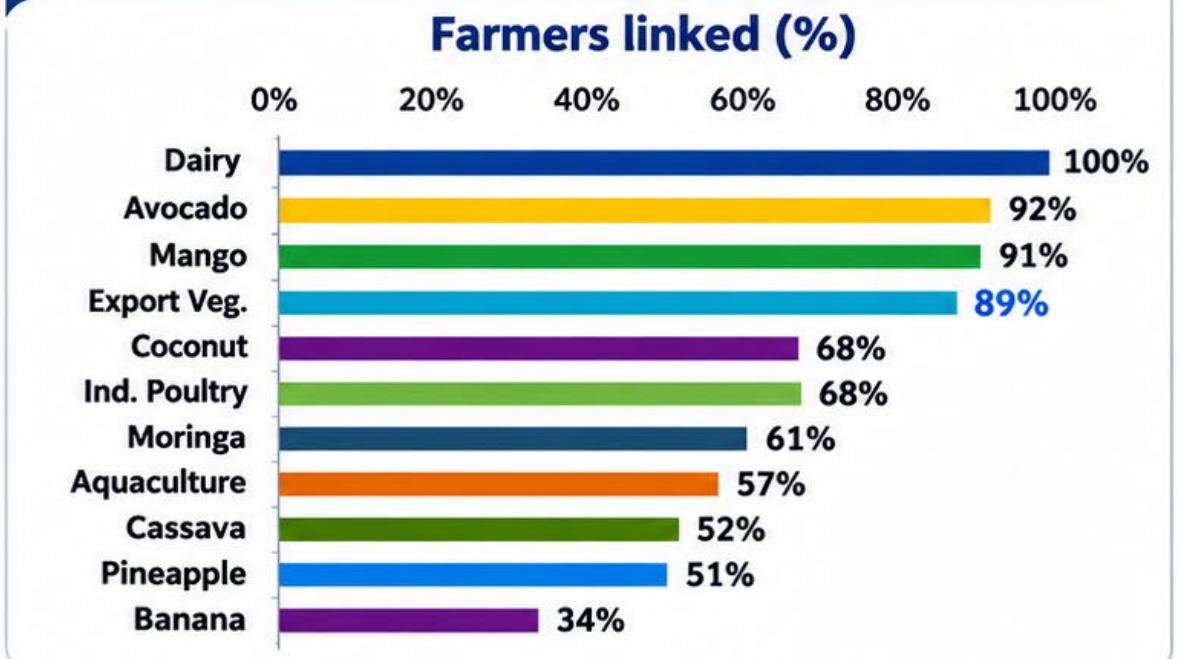

Market Linkages Expanded *(Value-Chain and Geographic Variation)*

46,115
farmers linked to markets
Target: 40,000 | 115% achieved

22,047
women linked
48.4% of farmers linked

8,913
youth linked
19.6% of farmers linked

Share of surveyed farmers linked to markets, by value chain

What the endline shows

Strongest market connectivity
Dairy reached 100%, while avocado (91.5%), mango (91.4%) and export vegetables (89.4%) showed strong linkage to buyers and aggregators.

Inclusion was broad, but not uniform
Women recorded stronger linkage in moringa (75.0%), coconut (71.9%) and aquaculture (65.2%); youth linkage was strongest in dairy (100%), export vegetables (87.0%) and moringa (85.7%).

County context
Overall linkage was highest in Nakuru (94.9%), Bungoma (91.2%) and Trans Nzoia (89.9%), but lower in Kisii (51.9%), Kilifi (58.0%) and Kakamega (60.4%).

Remaining commercialization constraint
Despite expanded linkage, poor prices (84.6%) and lack of markets (51.3%) remained the most widely reported market-access constraints.

INSIGHT: GEAP exceeded its farmer market-linkage target and achieved strong results in several commercially structured value chains; however, weaker linkage in selected value chains and counties, together with persistent price and buyer constraints, shows that market access gains were uneven.

Source: GEAP End-of-Programme Evaluation Survey, 2026

Trade fair engagements by SHF and SMEs for Market Development

Ecosystem Support for Inclusive Market Systems

Strengthening multi-stakeholder coordination, services and an enabling environment for competitive, inclusive and green agri-enterprises

MESPT
MICRO ENTERPRISES SUPPORT PROGRAMME TRUST

Key Achievements

1 Fishing guideline developed

3 Value chain strategies domesticated by counties

54 SMEs / cooperatives leaders engaged in circular economy dialogues

3 CASSCOM bills supported in Kakamega, Kwale and Makueni

Stronger stakeholder coordination and an enabling environment for market development

Key Interventions

Policy & Regulatory Support

- **1 Fishing guideline developed.**
- **3 value chain strategies domesticated by counties.**

Stakeholder Coordination & Dialogue

- Convened multi-stakeholder platforms (government, private sector, cooperatives, MSMEs, BDS providers) to address market and value-chain constraints.

Market Systems Strengthening

- Facilitated integration of support services (finance, BDS, certification, quality standards) to improve enterprise competitiveness and market access.

Technical Working Groups (TWGs)

- Established and supported TWGs to co-create solutions on market access, standards, quality and value-chain development.

Enabling Evidence & Learning

- Generated and shared evidence, lessons and good practices on inclusive, green and climate-resilient market development.

Impact: *A more coordinated, inclusive and market-ready ecosystem that drives sustainable and green growth for farmers, cooperatives and MSMEs.*

Programme Effectiveness – Key Achievements

Outcome 2: Increased sustainable productivity and profitability for smallholder farmers in targeted value chains in Kenya.

Key Achievements – Productivity and profitability improved substantially, but gains varied markedly across value chains.

+320%	69%	KES 164,827	7,232 ha
Average productivity	Average gross profit margin	Average annual sales revenue	Conserved / restored
1,294 → 5,439 kg/unit	37% → 69%	KES 44,695 → 164,827	Target: 1,339 ha

Value Chain Productivity and Profitability Performance

Value Chain	Baseline Yield	2026 Yield	Productivity Change	2026 Gross Margin	Reject / Loss in 2026
Mango	3,652	4,000	+10%	9%	50%
Export Vegetables	1,006	5,189	+416%	65%	9%
Pineapple	135	12,000	+8,785%	72%	10%
Coconut	1,145	2,310	+102%	63%	3%
Cassava	805	20,000	+2,384%	95%	3%
Moringa	480	1,818	+279%	23%	1%
Avocado	551	5,448	+888%	91%	<1%
Dairy	2,304	2,340	+2%	13%	2%
Indigenous Poultry	107	160	+50%	7%	8%
Aquaculture	224	267	+19%	51%	25%
Banana	3,830	6,300	+64%	17%	0%
Programme Average	**1,294**	**5,439**	**+320%**	**69%**	**10%**

KEY TAKEAWAYS

Productivity gains were broad-based but highly differentiated.
The largest increases were recorded in pineapple, cassava, avocado and export vegetables, while dairy, mango and aquaculture registered more incremental gains.

Higher productivity did not uniformly translate into stronger profitability.
Cassava (95%), avocado (91%), pineapple (72%), export vegetables (65%) and coconut (63%) recorded strong margins, while poultry, mango, dairy, banana and moringa remained comparatively constrained.

Post-harvest performance also varied.
Losses were negligible in avocado and banana and low in coconut, cassava and moringa, but remained material in aquaculture (25%) and particularly mango (50%).

Environmental results substantially exceeded programme expectations, with 7,232 ha conserved/restored against a 1,339-ha target, reinforcing the productivity pathway with natural-resource and climate-resilience outcomes.

OVERALL SUMMARY

GEAP recorded substantial improvements in productivity, profitability and environmental outcomes, but the results were not uniform across value chains. The evidence points to particularly strong performance where improved production practices were reinforced by aggregation, market access and value addition, while input and labour costs, disease pressures, post-harvest losses and market constraints moderated returns in several value chains.

ICT and Digital Outreach

MESPT
MICRO ENTERPRISES SUPPORT PROGRAMME TRUST

ICT & Digital Reach
Key Result

81%

of targeted value-chain actors impacted through ICT/ technology solutions

Target: **80%** | Achievement: **101.2%**

Digital Outreach and Use

Farmers reached

41,494 farmers reached of 42,000 targeted through phased SMS campaigns in the 2026 reporting period.

Decision-support content

GAP, weather forecasts, market intelligence, climate resilience, financial inclusion and green technology information.

Practical contribution

Digital channels complemented extension and market support by widening timely access to production, climate and market information.

Output Area 2: Increased Access to Green & Inclusive Agri-Financing to MSMEs – *Farmers' access to finance and financial inclusion*

GEAP substantially expanded inclusive agricultural finance, although financing depth and sustainability remained mixed.

INDICATOR	BASELINE	TARGET	ENDLINE	PERFORMANCE
FSPs strengthened in agri/green finance	30	50	**75**	**150%** ✓
Value-chain actors accessing financial services	0	20,000	**53,093**	**207%*** ✓
Agri & green financing	0	KES 3.0B	**KES 2.82B approved; KES 2.38B disbursed**	**79%** ●
Additional capital mobilized	0	KES 3.0B	**KES 2.21B**	**74%** ●
Finance learning products	0	7	**7**	**100%** ✓

KEY RESULTS AT A GLANCE

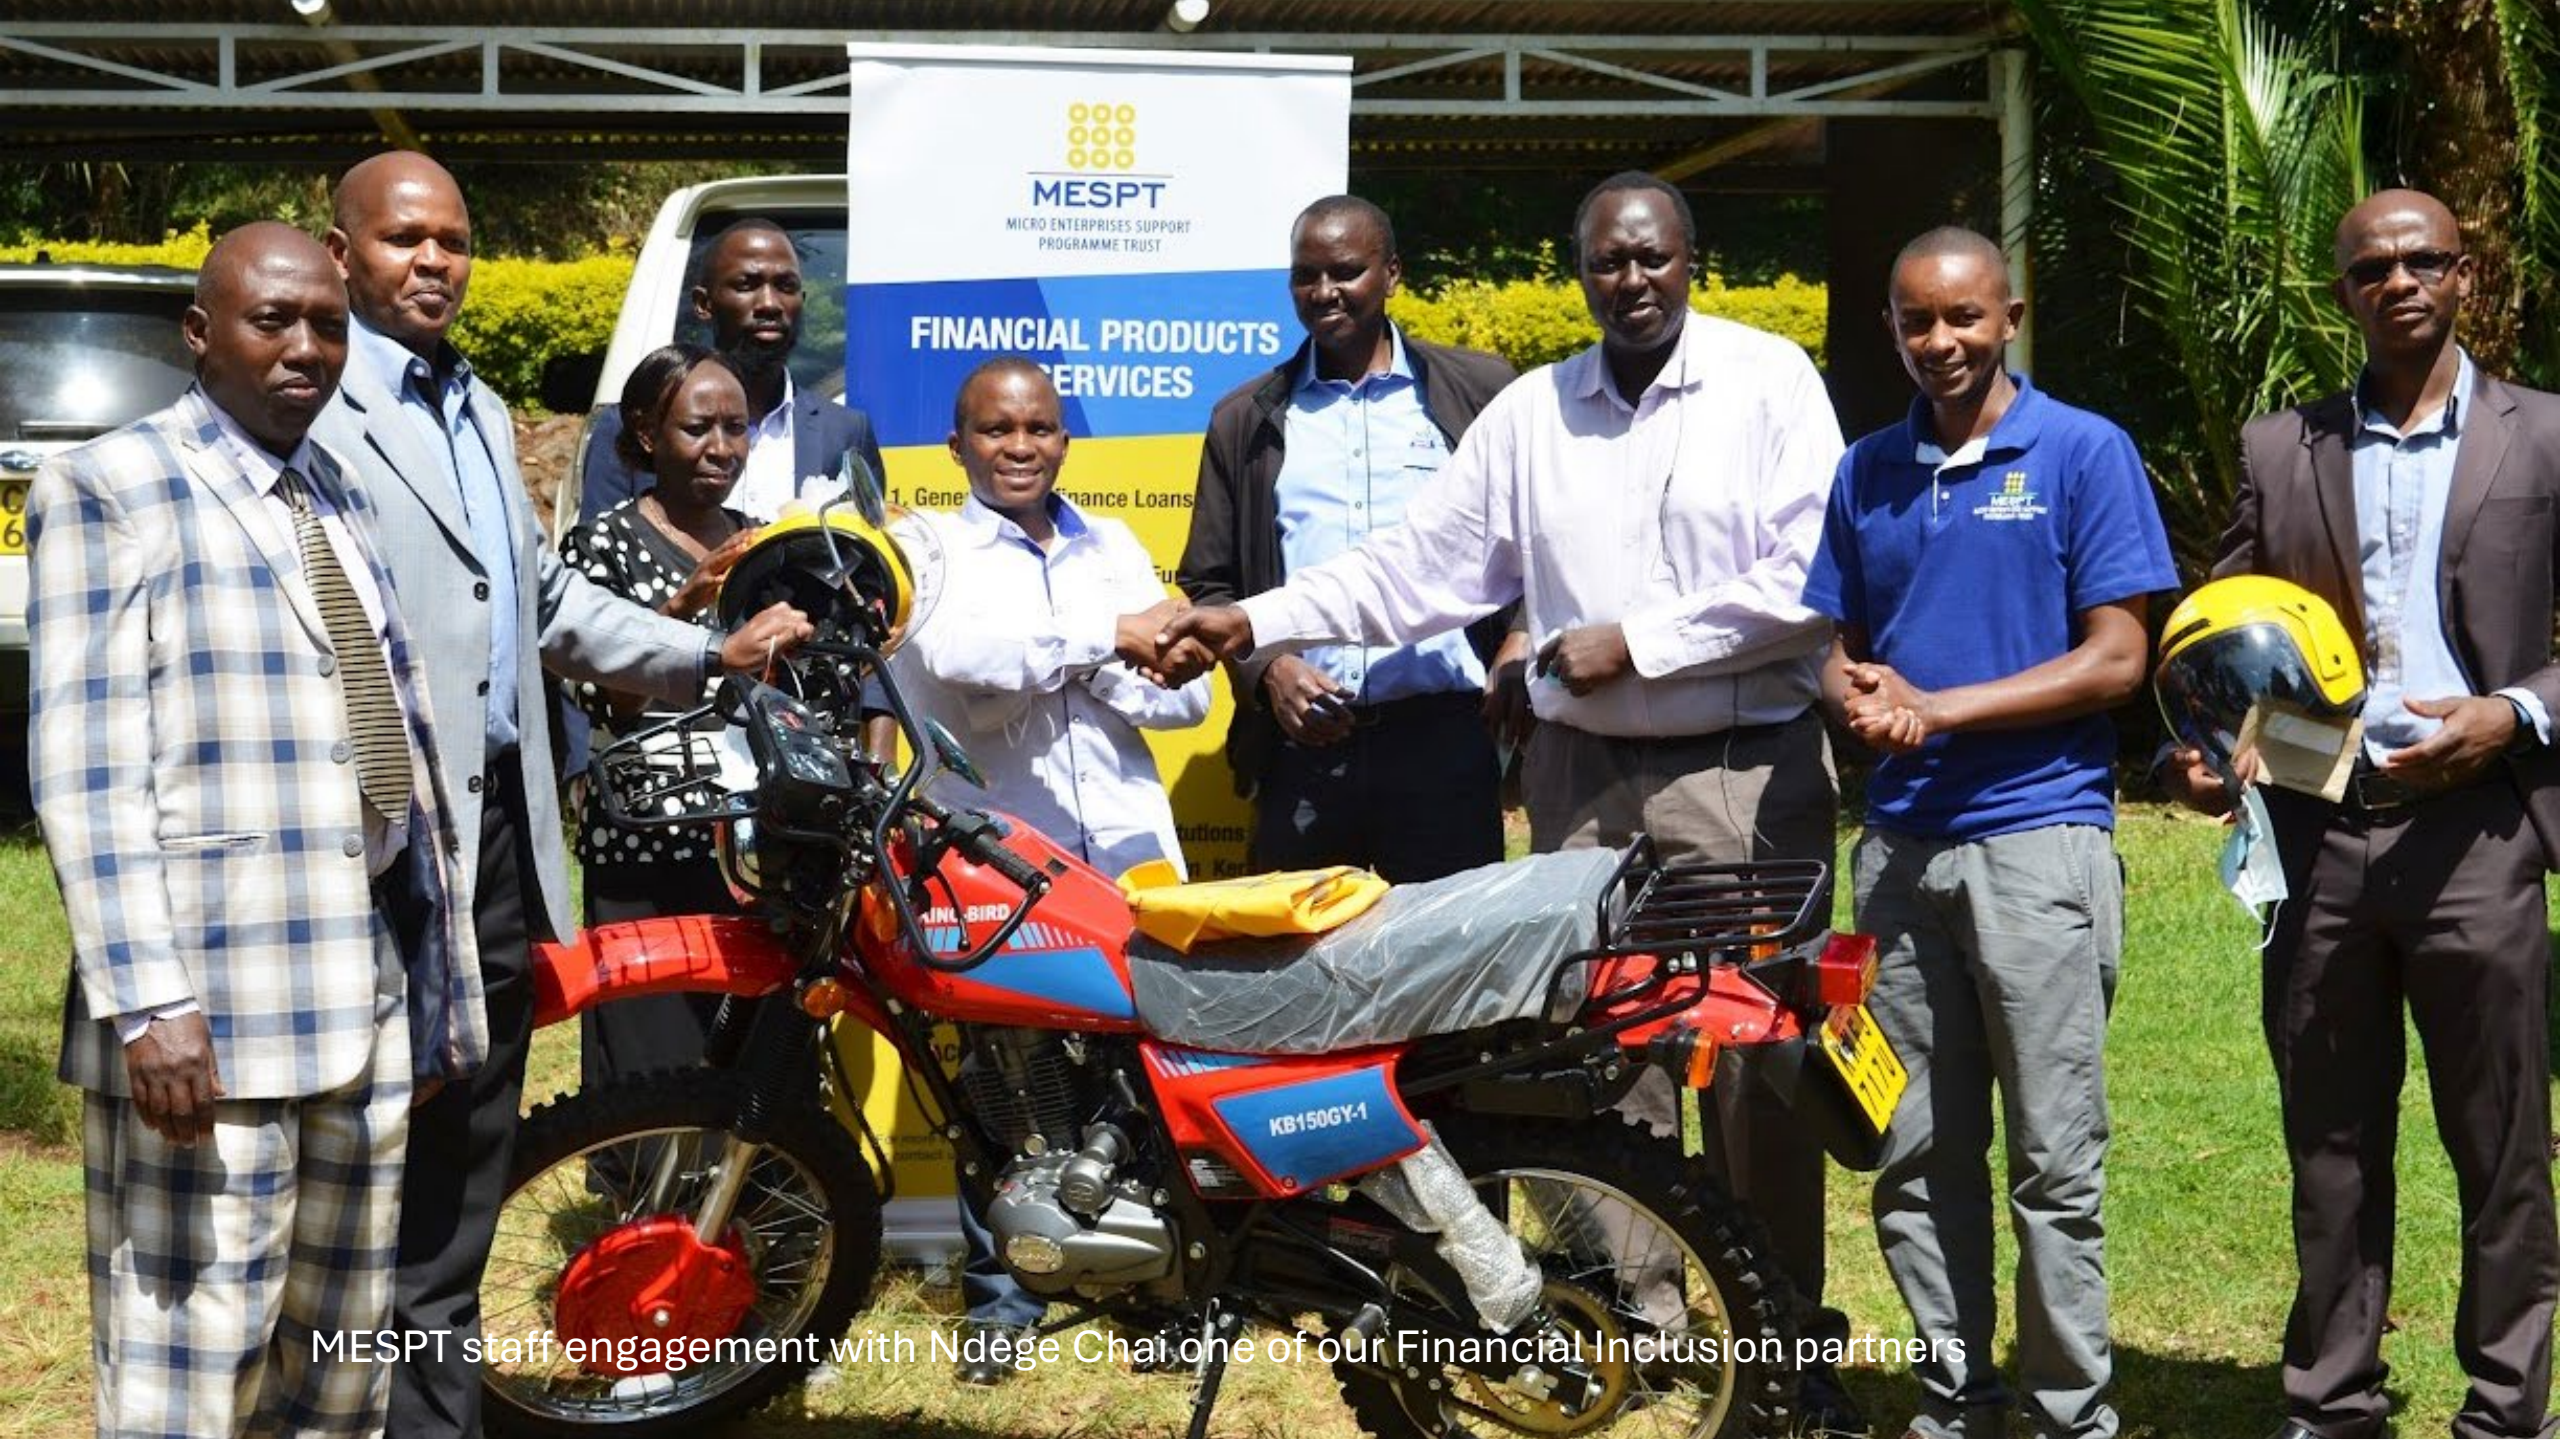

75 FSPs strengthened → **53,093** actors reached → **KES 2.38B** disbursed

KES 2.04B
Agricultural/value-chain finance

KES 347M
Green finance

GEAP's strongest financial-inclusion result was expansion of the financing ecosystem and beneficiary reach. FSP capacity and actors reached substantially exceeded targets, while the financing volume and additional capital mobilization remained below target—indicating stronger performance in reach than financing depth.

** Exceeded target*

MESPT staff engagement with Ndege Chai one of our Financial Inclusion partners

Output Area 2: *Increased Access to Green & Inclusive Agri-Financing to MSMEs – Financial Literacy Training & Adoption*

Financial-literacy support translated into adoption of improved financial practices, although progress varied across value chains.

VALUE CHAIN	RECEIVED FINANCIAL LITERACY TRAINING – ENDLINE	STARTED ADOPTING DUE TO GEAP	WAS ALREADY ADOPTING	NOT IMPLEMENTING
Aquaculture	91.3%	65.1%	28.5%	6.4%
Banana	58.5%	35.3%	2.7%	35.3%*
Coconut	88.0%	91.4%	0.6%	8.1%
Moringa	81.6%	100.0%	0.0%	0.0%
Export Vegetables	98.6%	68.7%	25.6%	5.7%
Avocado	96.5%	50.7%	41.2%	21.9%*
Dairy	97.8%	37.1%	21.8%	62.2%*
Cassava	72.6%	94.8%	0.0%	5.2%
Pineapple	81.8%	88.6%	3.6%	7.8%
Indigenous Poultry	92.1%	69.3%	10.6%	20.1%
Mango	84.9%	42.9%	53.7%	3.4%
PROGRAMME OVERALL	**85.8%**	**70.7%**	**—**	**16.6%**

TRAINING:

Financial-literacy training reached **85.8% of farmers** overall, with highest coverage in **export vegetables (98.6%), dairy (97.8%) and avocado (96.5%)**. **Coverage** was comparatively lower in **cassava (72.6%)** and **banana (58.5%)**, indicating uneven training reach across value chains.

ADOPTION:

Training exposure was accompanied by **substantial programme-induced adoption of improved financial practices**. Reported new adoption was strongest in **moringa (100%), cassava (94.8%), coconut (91.4%) and pineapple (88.6%)**. Conversely, **mango had a relatively large group already practicing** the assessed behaviours (53.7%), while adoption was less pronounced in **banana and dairy**.

GEAP converted financial-literacy training into demonstrable behavioural change, with substantial new adoption attributable to the programme; however, the strength of this conversion varied across value chains and their starting conditions.

** Indicates a relatively high share not yet implementing.*

Output Area 2: Increased Access to Green & Inclusive Agri-Financing to MSMEs – *Farmers' access to finance and financial inclusion*

65.4% Members of a financial institution

Women 61.4% | Men 69.5% | Youth 64.6%

31.5% Applied for credit

Women 31.3% | Men 31.8% | Youth 30.0%

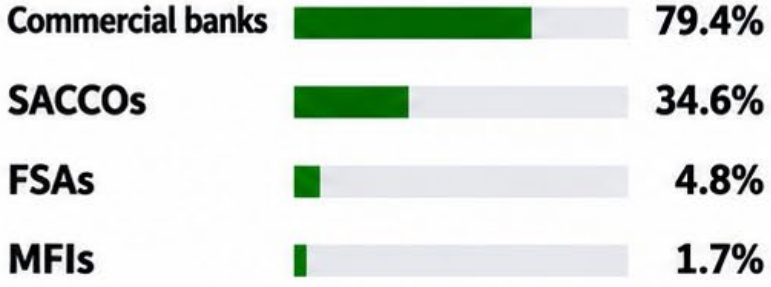

96.9% Agricultural loans approved

Once formal agricultural credit was sought

84.2% Used M-Pesa

Only 4.9% reported no mobile-money access

Where farmers accessed finance

Dairy was the main SACCO-led exception: 79.8% used SACCOs.

Type of credit applied for

General / household loans	51.8%
Agricultural asset loans	32.2%
Agricultural input loans	22.6%
Non-agricultural asset finance	4.5%
Green technology loans	1.8%

Average agricultural loan applied for: KES 90,270

Main constraints to credit uptake

No perceived need	49.5%
High interest rates	37.3%
Low / inadequate income	25.5%
Limited product awareness	17.1%
Collateral requirements	10.4%

Declined applications also reflected CRB listing, collateral, documentation and low income.

Digital financial inclusion

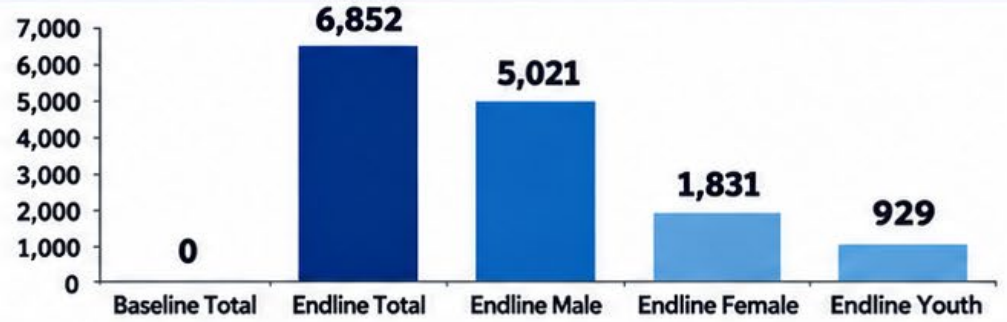

M-Pesa	84.2%
Fuliza	73.6%
M-Shwari	60.1%
Mobile lending apps	10.6%
Avg. digital credit limit	KES 5,258

Output Area 3: *Increased Adoption of Climate-Smart Agricultural Practices and Food Safety Standards by MSMEs*

Output Area 3 substantially achieved or exceeded its output targets, with particularly strong performance in certification and local service-provider capacity.

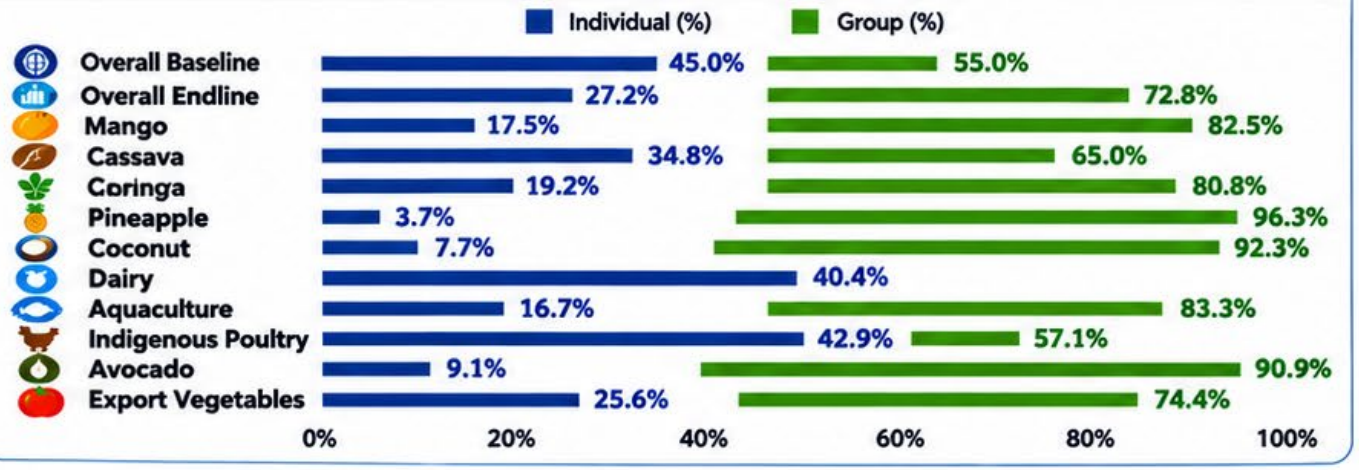

KEY OUTPUT INDICATORS	TARGET	ACHIEVEMENT	PERFORMANCE
Value chain actors certified	6,000	6,852	114%
Legislative processes supported	4	4	100%
Counties investing in surveillance/compliance	4	4	100%
Farmers trained	24,000	24,244	101%
Farmers adopting promoted practices	19,200	18,688	97%
Local service providers trained/equipped	1,249	3,085	247%
Learning/adaptation products produced	4	7	147%

VALUE CHAIN ACTORS CERTIFIED

Number of value chain actors supported by the programme in certification of product/market standards and social standards on food safety.

CERTIFIED ACTORS BY VALUE CHAIN – INDIVIDUAL VS GROUP (%)

6,852 actors certified

5,021 male (73.3%)

1,831 female (26.7%)

929 youth (13.6%)

Certification expanded substantially:
Certified actors increased from baseline to 6,852, with 5,021 men (73.3%), 1,831 women (26.7%) and 929 youth (13.6%). Global G.A.P. accounted for **62.6%** of certifications.

Output Area 3: *Increased Adoption of Climate-Smart Agricultural Practices and Food Safety Standards by MSMEs*

GAP Training and Adoption

Value Chain	Received GAP Training – Endline	Started Adopting due to GEAP	Was Already Adopting	Not Implementing
Aquaculture	**95.0%**	63.9%	16.0%	20.1%
Banana	**79.2%**	41.2%	39.8%	19.1%
Coconut	**92.0%**	91.5%	4.9%	3.7%
Moringa	**81.6%**	91.7%	8.3%	0.0%
Export Vegetables	**100.0%**	64.0%	28.9%	7.1%
Avocado	**100.0%**	86.3%	6.3%	9.0%
Dairy	**100.0%**	65.1%	17.6%	22.4%
Cassava	**77.4%**	97.1%	0.4%	2.5%
Pineapple	**98.2%**	88.4%	4.0%	7.6%
Indigenous Poultry	**97.2%**	78.0%	14.3%	7.7%
Mango	**100.0%**	42.9%	53.7%	3.4%
Programme Overall	**92.8%**	**73.6%**	**17.7%**	**9.3%**

GAP training expanded from **51.6%** at baseline to **92.8%** at endline (overall change is 41.2%), accompanied by strong behavioural uptake: **73.6%** attributed adoption to GEAP and only **9.3%** remained non-adopters.

Agribusiness and Marketing Training and Adoption

Value Chain	Received Agribusiness & Marketing Training – Endline	Started Adopting due to GEAP	Was Already Adopting	Not Implementing
Aquaculture	**92.5%**	67.7%	13.8%	18.8%
Banana	**81.1%**	48.8%	10.7%	40.5%
Coconut	**93.0%**	89.5%	2.4%	8.1%
Moringa	**79.6%**	91.7%	8.3%	0.0%
Export Vegetables	**97.9%**	64.5%	29.3%	6.2%
Avocado	**98.6%**	60.4%	1.9%	38.7%
Dairy	**97.8%**	58.3%	8.4%	37.5%
Cassava	**83.9%**	94.8%	0.0%	5.2%
Pineapple	**81.8%**	88.6%	3.6%	7.8%
Indigenous Poultry	**91.8%**	69.3%	10.6%	20.1%
Mango	**92.5%**	42.9%	53.7%	3.4%
Programme Overall	**90.0%**	**70.7%**	**13.2%**	**16.6%**

Agribusiness and marketing training more than doubled from **42.6%** at baseline to **90.0%** at endline (overall change of **47.4%**), with **70.7%** of farmers attributing adoption to GEAP; however, adoption gaps persisted in Banana, Avocado and Dairy.

Key Takeaway: GEAP has driven strong adoption of good agricultural practices and agribusiness skills across most value chains, with remaining gaps highlighting the need for tailored follow-up support in selected commodities.

Aerial view of aquaculture ponds at Labedcash our private sector partner in Kakamega

Output Area 3: *Increased Adoption of Climate-Smart Agricultural Practices and Food Safety Standards by MSMEs*

FOOD SAFETY TRAINING AND ADOPTION

Value Chain	Received Food Safety & Hygiene Training – Endline	Started Adopting due to GEAP	Was Already Adopting	Not Implementing
Aquaculture	**92.5%**	54.8%	40.5%	4.8%
Banana	**73.6%**	41.2%	39.8%	19.1%
Coconut	**95.0%**	96.2%	1.1%	2.7%
Moringa	**77.6%**	100.0%	0.0%	0.0%
Export Vegetables	**99.3%**	67.3%	30.9%	1.8%
Avocado	**97.2%**	84.1%	11.4%	4.5%
Dairy	**98.9%**	98.5%	9.8%	13.0%*
Cassava	**80.6%**	100.0%	0.0%	0.0%
Pineapple	**87.3%**	93.8%	0.0%	6.3%
Indigenous Poultry	**95.3%**	68.6%	13.4%	18.0%
Mango	**94.6%**	67.0%	32.3%	0.7%
Programme Overall	**90.2%**	**77.6%**	**16.3%**	**6.4%**

Food-safety capacity translated strongly into practice: nine in ten farmers were trained and more than three-quarters attributed adoption directly to GEAP, with programme-induced uptake reaching **100%** in Moringa and Cassava and **96.2%** in Coconut.

POST-HARVEST HANDLING TRAINING AND ADOPTION

Value Chain	Received Post-Harvest Handling Training – Endline	Started Adopting due to GEAP	Was Already Adopting	Not Implementing
Aquaculture	**93.8%**	65.9%	16.1%	18.0%
Banana	**67.9%**	24.6%	60.5%	15.0%
Coconut	**91.0%**	96.7%	1.7%	1.7%
Moringa	**77.6%**	100.0%	0.0%	0.0%
Export Vegetables	**99.3%**	69.6%	29.0%	1.6%
Avocado	**97.2%**	80.5%	2.6%	17.8%
Dairy	**100.0%**	88.6%	1.9%	6.5%*
Cassava	**79.0%**	94.2%	0.0%	5.8%
Pineapple	**83.6%**	93.4%	0.0%	6.6%
Indigenous Poultry	**89.0%**	77.1%	19.6%	3.3%
Mango	**91.4%**	66.2%	31.4%	2.5%
Programme Overall	**88.2%**	**77.9%**	**14.8%**	**7.1%**

Post-harvest handling training achieved broad reach and strong behavioural conversion, with **77.9%** attributing adoption to GEAP. Uptake was particularly strong in Moringa **(100%)**, Coconut **(96.7%)**, Cassava **(94.2%)** and Pineapple **(93.4%)**, although adoption remained more constrained where practices required complementary infrastructure or investment.

KEY TAKEAWAY: GEAP has driven strong adoption of good agricultural practices and post-harvest handling skills across most value chains, with remaining gaps highlighting the need for tailored follow-up support in selected commodities.

** Indicates high non-implementing share.*

Output Area 4: *Green Transformation & Increased Climate Adaptation by Targeted MSMEs*

All targets under Output Area 4 were achieved, with **strong overperformance** across key green transformation outcomes.

24,623
Farmers adopting greening & climate adaptation solutions
152% of target

5,294,070
Trees planted covering **7,232 Hectares**
134.1% of target

25 SMEs
Recycling & reprocessing agricultural waste
167% of target

RESULTS AREA	TARGET	ENDLINE ACHIEVEMENT	PERFORMANCE
Farmers trained on Green Transformation & CCA	20,000	22,246	111% ✓
Farmers adopting greening & CCA solutions	15,500	24,623	159% ✓

FLAGSHIP GREEN INNOVATIONS

29 green technologies identified, piloted & rolled out — 145% of target

- **Butterfly Technology** – integrated water harvesting & climate-smart irrigation; demonstration at Bukura ATC, 5 local artisans trained and 14 additional ponds established.
- **BSF & Azolla** – converted organic waste and locally available biomass into lower-cost livestock/aquaculture feed and organic fertilizer.
- **Renewable Energy** – solar irrigation, solar incubators, fireless brooders and biogas supported cleaner, resource-efficient production.
- **Regenerative & Circular Agriculture** – Bokashi, composting and organic waste recycling strengthened soil health and nutrient cycling.

Key takeaway: *GEAP combined technology demonstration, local skills development and institutional learning platforms to support continued diffusion beyond direct programme beneficiaries.*

Targets across the entire Green Transformation portfolio were exceeded — progressing from farmer capacity building to adoption, green finance, circular enterprise models, innovation and ecosystem restoration.

EXAMPLES OF GREEN TECHNOLOGIES ADOPTED

Innovating today for a sustainable and resilient tomorrow

Solar-powered irrigation for efficient water use

Butterfly funnel model – a water harvesting technology

Pheromone traps for eco-friendly pest management

Fireless brooder – an innovation from plastic waste materials

Output Area 4: *Green Transformation & Increased Climate Adaptation by Targeted MSMEs*

Green Transformation and Climate Change Training and Adoption

Value Chain	Trained	Started Adopting due to GEAP	Already Adopting	Not Adopting
Aquaculture	**78.9%**	49.4%	27.4%	23.2%
Banana	**49.1%**	98.0%	4.3%*	2.0%
Coconut	**92.0%**	96.4%	0.6%	3.2%
Moringa	**77.6%**	91.2%	3.0%	5.9%
Export Vegetables	**85.2%**	68.2%	27.0%	4.8%
Avocado	**96.5%**	56.2%	34.3%	12.7%
Dairy	**95.6%**	62.5%	12.0%	25.5%
Cassava	**77.4%**	97.6%	0.8%	1.6%
Pineapple	**94.5%**	76.8%	11.0%	12.2%
Indigenous Poultry	**89.6%**	57.9%	9.7%	32.4%
Mango	**97.8%**	42.6%	45.8%	11.6%
Programme Overall	**84.9%**	**72.4%**	**16.0%**	**12.3%**

The broad training reach **(84.9%)** translated into substantial adoption, with **72.4%** of farmers starting green practices because of the programme. Significant baseline–endline gains were evident across climate-smart production and water management, including aquaculture adoption rising from **30.0%** to **75.0%**.

Waste Management Training and Adoption

Value Chain	Waste Management Training	Started Adopting due to GEAP	Already Adopting	Not Adopting
Aquaculture	79.5%	77.6%	10.7%	11.7%
Banana	66.0%	68.6%	20.0%	11.4%
Coconut	91.0%	93.2%	1.2%	5.8%
Moringa	75.5%	100.0%	0.0%	0.0%
Export Vegetables	88.7%	68.7%	25.6%	5.7%
Avocado	90.1%	50.7%	41.2%	21.9%*
Dairy	94.4%	37.1%	21.8%	62.2%*
Cassava	75.8%	100.0%	0.0%	0.0%
Pineapple	81.8%	93.4%	2.3%	4.5%
Indigenous Poultry	93.7%	75.3%	20.8%	3.8%
Mango	92.5%	65.1%	32.6%	2.3%
Programme Overall	**84.5%**	**75.4%**	**16.0%**	**11.8%**

GEAP moved waste management increasingly towards productive reuse and circularity: **84.5%** received training and **75.4%** adopted practices because of the programme. From midterm to endline, recycling/reprocessing rose from **33.9%** to **52.8%**, while composting and productive reuse increased and waste burning declined from **29.2%** to **22.8%**.

** Indicates relatively high non-adopting share.*

Gender and Social Inclusion Mainstreaming

Advancing Equality, Inclusion and Human Rights in Agricultural Value Chains

6,528 farmers trained on Gender roles and human rights in value chain development using **30** master TOTs.

75 financial institutions sensitized on Gender and **2X** Criteria.

145 county staff sensitized on Gender and Social Inclusion through the **Gender Unit's partnership** with GEAP.

KEY ACTIONS & ACHIEVEMENTS

- Formed a **Gender focal points working group** for training coordination.
- Strengthened gender organizational **partnership with Tanager** that was able to capacity build MESPT on Gender programming.
- Built **MESPT staff capacity** on gender and **2X Criteria** for SME engagement.
- Facilitated **SME gender trainings** on their role in gender and human rights and how it enhances equity and equality within businesses.

Gender Equality and Social Inclusion Strategy

A practical framework that provides guidelines to enhance equality, social inclusion and human rights approaches in value chains, using tools such as the Gendered Value Chain Analysis (**GVCA**) and the Gender Action Learning System (**GALS**).

Gender, Youth and Social Inclusion

GYSI became progressively embedded across GEAP's technical workstreams, contributing to **stronger household agency, women's participation and youth economic opportunities** — while leadership, unpaid care work and systematic inclusion of vulnerable groups remain unfinished areas.

WOMEN'S AGENCY & HOUSEHOLD DECISION-MAKING

81%	began jointly developing household visions following the Vision Journey intervention
66%	jointly decided on profit reinvestment and use of sales income
89%	perceived women and men as benefiting equally from value-chain income
100%	of surveyed female group officials received leadership and governance training

YOUTH & INCLUSIVE ECONOMIC PARTICIPATION

Beyond production	Youth increasingly participated through BSPs, green enterprises and specialized agricultural services.
Service pathways	Spraying, vaccination, harvesting, pruning, grafting, nurseries, value addition, BSF and Azolla.
Green enterprise	Circular-economy and green technologies created entry points for enterprises and employment, including for youth with limited land access.
59 MSMEs	Strengthened capacity in gender, social inclusion and human rights, extending inclusion into the enterprise ecosystem.

PROGRESS WITH UNFINISHED BUSINESS

- **95%** equal opportunity
- **89%** positive change in how women & men were valued
- **30% vs 22%** men vs women in formal group leadership
- **73%** household chores predominantly undertaken by women
- **59%** increased women-youth workload

Evaluation note: *Evidence on specific vulnerable groups, including persons with disabilities, was less systematic—an area for stronger targeting and monitoring in future programming.*

CAMLPO Ltd Black Soldier Fly Unit was rehabilitated and equi
in partnership with MESPT through the Green Employme
Agriculture Programme funded by DANIDA.
Programme Period: 2021-2025

Programme Impacts

GEAP generated mutually reinforcing economic, commercial, food-safety and green transformation outcomes.

MESPT
MICRO ENTERPRISES SUPPORT PROGRAMME TRUST

OVERALL PROGRAMME IMPACT

320%
increase in productivity

32%
increase in gross profits from baseline

46,115
farmers linked to markets

53,093
actors accessed finance

1,781
full-time jobs created

The combined evidence demonstrates GEAP's contribution to more productive, commercially oriented, food-safe, inclusive and green agricultural value chains.

MARKET ACCESS

184,750 MT aggregated
(KES **9.567B** sales turnover)

- Stronger aggregation, market readiness & buyer linkages

INCLUSIVE FINANCE

53,093 actors accessed financial services

- Financial literacy, savings & investment readiness

FOOD SAFETY & PRODUCTIVITY

73% GAP adoption |
77% food-safety adoption

- Better quality, compliance & competitiveness

GREEN TRANSFORMATION

72% green/climate-smart adoption

- **7,232 ha** restored | **216** green jobs

> *GEAP changed how we look at farming. We are not only producing: we now think about quality, costs, records and where the market is.*
>
> **— FGD Participant, LREB**

Impact was strongest where technical capacity, practical technologies, finance, markets and extension support converged.

Programme Impact *(Cont'd)*

ENTERPRISE-LEVEL IMPACT

- **71%** adopted agribusiness management practices
- **25** SMEs recycling/re-processing waste
- **15** SMEs implemented energy-saving measures
- **50** women- & youth-led green enterprises strengthened
- Growth in jobs, income, competitiveness & diversification

SYSTEM-LEVEL IMPACT

- Stronger farmer–SME–FSP–buyer linkages
- ToTs & BSPs brought services closer to producers
- Food safety increasingly embedded in county systems
- Stronger cooperatives, aggregation structures & multi-stakeholder coordination

MARKET & UPTAKE OUTCOMES

- Farmer-to-farmer diffusion of technologies
- Increased demand for BSP & ToT services
- New green enterprises around BSF, Azolla & organic inputs
- Farming increasingly viewed as a business
- Demand for support expanded beyond GEAP coverage

> *"The support was not only technical. We improved the way we run the enterprise, manage quality, keep records, and connect to customers. That made the business more competitive."*
>
> ***— SME representative***

> *"GEAP did not establish a parallel extension structure; it strengthened the people and systems already working with farmers. That gives the interventions a detter chance of continuing."*
>
> ***— County technical officer***

IMPACT WAS SIGNIFICANT, BUT NOT UNIFORM

Working-capital constraints, high input/feed costs, inadequate processing and cold-chain infrastructure, climate and disease risks, price volatility and slower uptake of capital-intensive technologies moderated the depth of gains.

Overall: GEAP strengthened the local enterprises, relationships and service systems required to sustain a more commercial, inclusive, food-safe and climate-resilient agricultural system.

Programme Impacts *Cont..*

Beyond measurable gains in productivity, sales and adoption, GEAP created **meaningful change** in the lives of participating households. By strengthening livelihood security, expanding economic opportunities, enhancing agency and building resilience, the programme helped beneficiaries move from short-term gains to more sustained wellbeing. This impact was enabled by **locally rooted delivery** models—**BSPs, ToTs, Gender Champions and Data Champions**—which brought programme investments closer to communities and translated them into practical, lasting change at household and beneficiary level.

WELFARE IMPACT	WHAT CHANGED	HOW GEAP ENABLED THE CHANGE
Income & livelihood security	More productive and commercially oriented enterprises strengthened incomes, reduced costs and improved the reliability of agriculture as a livelihood.	**BSPs & market linkages** connected farmers to enterprise services, technologies and commercial opportunities.
Employment & economic opportunity	Enterprise growth, service provision and green innovations created new livelihood and employment pathways, particularly for youth.	**BSP and ToT models** created locally anchored technical and entrepreneurial service opportunities.
Agency & household decision-making	Financial literacy, record keeping and enterprise planning strengthened farmers' capacity to plan, invest and manage household and business resources. Women gained greater voice in production and enterprise decisions.	**Gender Champions & GALS** strengthened participation, joint decision-making and women's economic agency.
Resilience & adaptive capacity	Climate-smart practices, diversification, savings and green technologies strengthened households' capacity to manage production, climate and income shocks.	**ToTs and BSPs** provided practical demonstrations, follow-up and locally accessible technical support that reinforced sustained adoption.
Access to services & continued support	Farmers became better connected to extension, finance, markets, information and local support systems.	**ToTs, BSPs & Data Champions** decentralized knowledge, services and monitoring, strengthening responsiveness and continuity beyond direct programme support.

Programme Sustainability

Building resilient systems.
Driving lasting impact.

Systems Strengthened
Institutional systems, services and local capacities reinforced for long-term impact.

Partnerships Deepened
Stronger collaboration across value chains and with public & private partners.

Resilient Practices
Sustainable, climate-smart and food-safe practices embedded in routine systems.

Inclusive Growth
More opportunities, better incomes and jobs for women, youth and SMEs.

Lasting Legacy
Institutional and market foundations enable continued scale and impact.

SUSTAINABILITY FOUNDATIONS

Institutional ownership
Programme functions embedded within County Governments, farmer organizations, cooperatives, SMEs and other existing structures rather than parallel project systems.

Decentralised service delivery
ToTs, BSPs, SSPs, community vaccinators, nursery operators and other local providers retain technical and advisory capacity within communities.

Commercially sustained relationships
Producer–buyer, processor, exporter and financial-service linkages increasingly operate through mutual commercial incentives rather than project facilitation.

Embedded practices & technologies
GAP, food safety, enterprise management and viable green/climate-smart technologies are increasingly integrated into routine production and business practices.

Local ownership & knowledge diffusion
Farmer-to-farmer learning, demonstration sites and community champions are supporting replication beyond direct programme beneficiaries.

RISKS & CONDITIONS FOR CONTINUITY

Access to finance
High borrowing costs, collateral requirements and limited working capital constrain continued investment, particularly in irrigation, mechanization, certification and value addition.

Uneven institutional capacity
County budgets and staffing vary, while some farmer organizations still require stronger governance, financial management and leadership.

Market & infrastructure constraints
Price volatility, inconsistent demand, logistics, aggregation, processing and compliance costs may limit commercial sustainability.

Climate & production risks
Drought, erratic rainfall, pests and diseases continue to threaten production and enterprise resilience.

Inclusive participation
Sustaining women's and youth gains depends on continued access to productive resources, profitable enterprises and meaningful economic and leadership opportunities.

Sustainability Outlook

GEAP's strongest legacy is the institutional and market architecture left behind—local ownership, decentralised technical capacity, functioning commercial relationships and knowledge diffusion provide a credible platform for continuation and scaling beyond donor support.

> *"The County Focal Person model… created a formal institutional channel through which programme activities were planned, coordinated and delivered—and this channel is now embedded in the county's extension architecture, even beyond the programme's formal life."*
>

DANISH INTERNATIONAL DEVELOPMENT COOPERATION

KEY MESSAGE

GEAP demonstrated that integrated market-systems programming can generate **strong and sustainable results**, but the depth and scale of transformation remain influenced by **structural constraints** in finance, markets, infrastructure, climate resilience and inclusion.

KEY CHALLENGES / EMERGING ISSUES	KEY LESSONS LEARNED
Finance & investment constraints – Limited working capital, cost of credit and collateral requirements constrained enterprise expansion and uptake of capital-intensive technologies.	**Integration matters** – Strongest results occurred where technology + finance + markets + extension support converged around the same value chain actors.
Market-system bottlenecks – Price volatility, inconsistent demand, inadequate aggregation, processing and cold-chain infrastructure limited full commercialization.	**Market linkages must go beyond buyer connections** – Sustainable commercialization requires aggregation, quality, value addition, business capability and reliable market relationships.
Climate & production risks – Drought, erratic rainfall, pests, diseases and high input/feed costs continued to affect productivity and profitability.	**Adoption follows demonstrated value** – Practical demonstrations, ToTs/BSPs, starter technologies and continued technical support were more effective than stand-alone training.
Uneven technology uptake – Capital-intensive green technologies were less accessible and affordable, leading to a greater risk of exclusion for smallholders and cost-saving benefits.	**Green transformation must have a business case** – Technologies scale more readily when they reduce costs, improve productivity or generate additional income, supported by appropriate financing.
Institutional & service-capacity gaps – Uneven county resources, extension capacity, certification processes and organizational capability affected continuity and scale.	**Local institutions are the pathway to sustainability** – County systems, farmer organizations, SMEs, ToTs, BSPs and other community service providers should be strengthened rather than parallel delivery structures created.
Inclusion remained incomplete – GYSI was strengthened later in implementation; women retained disproportionate unpaid work and increased economic participation sometimes increased women/youth workloads.	**Mainstream inclusion from inception** – Participation alone is insufficient; future programming should address agency, leadership, control of resources, workload and intersecting vulnerabilities throughout implementation.

"The County Focal Person model… created a formal institutional channel through which programme activities were planned, coordinated and delivered—and this channel is now embedded in the county's extension architecture, even beyond the programme's formal life."

— County Focal Person, LREB
